

Correcting URL Settings

For 7940 and 7960's models

To convert your phone from dial letter format to dial number format, follow the instructions in this sheet.

When looking at your phone, your 3 main keys should read:

Redial, NewCall, CfwAll.

1. Pick up your phone. The same buttons now read:
Redial, EndCall, Number.
2. Select the Number softkey. It should now read:
URL

You have now corrected the issue and should be able to dial out numbers.
