

SMART ISP

Smart Choice is the smartest choice when choosing an Internet Service Provider (ISP). As a full-service ISP, we manage and maintain your network while alerting you of any unusual activity that could have an adverse effect on your productivity. We ensure that your network is running efficiently, so you can stay focused on running your business.

BENEFITS

Bandwidth Reporting

View in-depth reports on bandwidth usage from applications, users and conversations.

Proactive notification of minimum/maximum thresholds

We manage your network effectively by monitoring when hosts exceed certain threshold limits and alert you immediately.

Historical usage data

Examine data on past bandwidth usage and network activity.

Top Talkers information

Obtain information regarding heaviest traffic patterns and most-used applications on your network.

Identify bandwidth hogging users and applications

Pinpoint users and applications that are consuming the most bandwidth.

Resolve network performance issues

SCC detects, diagnoses and resolves network performance issues.

LAN/WAN programming and maintenance of all SCC provided equipment

LAN/WAN devices are configured to enable individuals to oversee and regulate networks. SCC will handle all maintenance of equipment we provide.

Removal of finger pointing

SCC eliminates the need for multiple vendors by handling the management of network circuits and hardware, allowing clients to focus on their business.

Access to engineers

We have a vast array of SCC-certified engineers available to help with routers and switches.

Smart 24/7/365 up/down monitoring

We monitor your circuits, firewalls and routers 24x7x365, and alert you of up/down activity on your network.
