

TRADITIONAL PBX TO CLOUD

We will integrate your **Traditional PBX** with our **SCC Cloud**, giving you the convenience and accessibility to communicate with your customers and users worldwide. Using a 4-digit dial, remote users can be connected to your offsite PBX or softphone instantly.

FEATURES:

- Remote Users via Internet
- Softphones
- Cloud Disaster Recovery
- Disaster Recovery Auto-Attendant
- eFAX

HANDOFF:

- Analog (POTS)
- Smart PRI
- Smart SIP

Our **Cloud PBX Services** are ideal for companies who want to gain control of their voice and data networks—at a price they can afford. With our Cloud PBX, you get all the advantages of an advanced call routing system without the burden of managing the system yourself.

As a Cloud system, the PBX resides offsite, saving you the expense of having to buy and upgrade telecom system hardware. Incoming calls are processed through **Smart Choice** and then sent to your company's phone extensions or routed to the first available person in a department.

Our Cloud PBX System can be run over T1, Cable, EoC and Fiber Lines. Choose from several service options to fit your business needs, including the **OmniVoice Web Portal** that lets you manage a wide range of features online, at your convenience.

BENEFITS:

- **Savings** – No PBX equipment to buy and install, & no costly maintenance contracts.
- **Adaptable** – Reduce the costs of moving, adds and changes to your telecom system.
- **Seamless Service** – Dial remote locations as an extension of your office.
- **Enhanced Call Processing** – Manage incoming calls that can't be immediately picked up by your staff.
- **Convenience** – Make calls straight from your desktop.
- **Stay In-Touch On The Go** – Provide greater accessibility for mobile users and business travelers.
- **Accessible** – Several people can be reached from a single business number.
