

CORRECTING URL SETTINGS TO A CISCO 79×0

When looking at your phone, your 3 main keys should read:

Redial, NewCall, C fwdAll.

1. Pick up your phone. The same buttons should now read: **Redial, EndCall, Number.**
2. Select the **Number** softkey. It should now read:
URL

You have now corrected the issue and should be able to dial out numbers.
